

GE HealthCare

GE HealthCare in Utah

2024 Economic Impact

GE HealthCare plays a significant role in Utah's economy through our Salt Lake City facility, a key site for producing mobile fluoroscopy and cone-beam computed tomography (CT) imaging C-arms that support surgical and interventional procedures worldwide.

The impact of GE HealthCare on Utah extends well beyond the walls of our facilities. As a key contributor to the state's economy, we create high-quality jobs, forge strong research and clinical partnerships, and fuel innovation that benefits not only the healthcare sector, but communities statewide.

Jobs

~580

total employees and contractors in UT, including highly skilled roles in manufacturing, engineering, and research.

Supporting Patient Care

235,000+ patients

receive care each year using GE HealthCare equipment, including at some of the state's largest and most trusted healthcare systems.

Wages
